

Dear ESAM members,

As a pioneer Aerospace Medicine specialist, I am VicePresident of AIMAS (Italian Aerospace Medicine Association), I have been teaching "Human Physiology in Space" within the Sapienza University for almost twenty years and act as clinical endocrinologist with a special interest in diabetes in the San Raffaele Research Hospital, Rome, Italy.

I have acquired experience with the role of ESAM Secretary General already some years ago and this time, thanks to the presence a very efficient administrative assistant, I can have a chance to devote most of my energies to the achievement of two main ESAM goals, i.e., support to well-trained and normoglycemic pilots on insulin for license release/renewal and prevention/care insulin resistance consequences expected to occur in long-duration space flights.

I hope this program meets your favor and, in case you provide me with your votes and support, get ready to serve ESAM for the next two years within the Executive Committee as the Secretary General once again.

Heartily regards to all of you,
Prof. Felice Strollo
